PROJECT CHARTER

Project Title	ParkIT	Development Company	Software Corp
Project Start Date	Oct. 3, 2026	Project End Date	Jan. 31, 2027

Business Need

The current market is severely lacking when it comes to an all-encompassing software application that include parking garages, event parking and metered parking options. Creating a parking garage software system that integrates seamlessly with local parking applications in real time would also eliminate the need for users to have multiple applications. There is a strong market need to collect and consolidate all features from competitor parking applications so that only one application is necessary and preferred by users in the United States.

Project Scope	Purpose
This software system will be a web and mobile Garage Parking platform for drivers to locate, reserve, and pay for parking spaces in parking garages in real time. Parking garage businesses will also benefit by increasing traction with the visibility gained through use of the software application. The system will offer an easy and streamlined platform for both users and garage business owners. Garage users/customers will be able to contact each garage directly for any questions, refunds, and disputes.	To connect parking space users with parking business owners.This application will offer a platform in which both parties can communicate and conduct business in real time.

Financials

Budget to complete this project is $5,000,000

Milestones Schedule

Milestone	Target Completion Date	Actual Completion Date
Hand off to Developers	Nov. 15	TBA
Deployment	Jan. 1	TBA

Teams & Leadership Roles

Project Management Team:	Project Manager: Laura Wainwright	Product Owner: Rocio Martinez	
Development Team:	Engineering Manager: Maya Zimmerman	QA Manager: Leana Atkins	Tech Lead: Tabatha Livingston
Design Team:	Design Manager: Jasmine Freeman	Lead UX Researcher: Patricia Scharer	Lead UI Designer: Waheeda Khalil
Marketing Team	Marketing Manager: Megan Smith
